

NEFOTIR.AI

Cloud & AI acceleration — agents embedded with your teams — not another slide deck.

INVESTMENT PACKAGE

From legacy systems to the modern, AI-accelerated enterprise.

www.nefotir.ai

The Opportunity

Enterprise AI ambition is outrunning enterprise AI execution

Nefotir.ai embeds and accelerates client teams with Nefotir's own forward-deployed agents — to modernize legacy ERP and integration environments and stand up governed AI capability, with a purpose-built accelerator behind the flagship legacy-modernization practice — embedded, not advisory.

Nefotir.ai
Cloud & AI Acceleration — Embedded in Your Team

 Nefotir.ai · Boca Raton, FL · Web: www.nefotir.ai

Executive Summary

Mission & Positioning: Nefotir.ai is a cloud and AI consulting firm built on an evolution of the "forward-deployed engineer" model pioneered by firms like Palantir — embedding senior cloud and AI engineers directly inside client teams, assisted by Nefotir's own forward-deployed agents (purpose-built AI agents deployed into the client's environment alongside them), to ship working systems, rather than delivering strategy decks that sit on a shelf.

Opportunity Highlight: Enterprise AI Spend Is Surging — Enterprise Execution Is Not Keeping Up.

Boards are directing CTOs to "do something with AI" faster than most organizations can hire or reorganize for it. Industry research shows the majority of enterprise AI initiatives still fail to meet stated goals, in-house AI expertise is scarce, and shadow-AI risk is rising. That gap — capable teams to actually build and govern AI and cloud modernization work — is where Nefotir sits.

Flagship Practice: Legacy Modernization — helping mid-to-large organizations modernize aging ERP landscapes and integration layers, with a purpose-built accelerator covering SAP, MuleSoft, and Oracle migrations. The Connector Mapping Table gives Nefotir a differentiated, repeatable playbook rather than a generic systems-integrator approach.

Ask at a Glance

Nefotir.ai is formally raising \$5M via a SAFE in this first round to fund expansion and initial operational costs — building out the delivery team, standing up the accelerator IP, and converting pipeline into paying client engagements at scale. This is an open invitation to investors and strategic partners who understand the arc from services firm to a productized accelerator platform, and want to be at the table from the start.

Strategic Intent

Build Nefotir into the go-to embedded delivery partner for mid-to-large organizations that fell behind in the cloud and AI transition — starting with a sharp, defensible wedge in legacy ERP and integration modernization, then expanding into GenAI implementation, data platforms & MLOps, managed cloud/FinOps, AI governance, and agentic orchestration as delivery capacity and reference clients accumulate.

Legacy Integration Is Draining Budget — While AI Moves Past You

Aging legacy cores

ERP landscapes and integration layers — including MuleSoft and homegrown middleware — get more costly and brittle every renewal cycle.

AI is moving faster than IT

GenAI adoption pressure is real, but most mid-market teams lack the bandwidth to modernize and adopt AI at the same time.

The underserved middle

Big consultancies price for enterprise scale. Boutique shops don't have the technical depth to deliver.

Legacy Modernization — Assess, Map, Migrate

Nefotir's flagship practice modernizes legacy ERP landscapes and integrations for mid-to-large organizations, including a purpose-built accelerator for SAP, MuleSoft, and Oracle migrations.

1

Assess

Review the client's current systems and contracts to scope the work and timeline.

2

Map

Apply Nefotir's proven modernization playbook, refined across every prior engagement.

3

Migrate

Phased, cost-validated cutover to the client's new system — with no business disruption.

Positioned in the underserved middle — deeper than boutique shops, more focused than Deloitte-scale legacy integrators or platform-specific partner networks.

Why this matters as an investment: because the same three-step playbook repeats on every engagement, delivery cost per client falls and quality stays consistent as Nefotir takes on more clients — the makings of a business that gets more efficient with scale, rather than one where every engagement starts from scratch.

Why AI, Why Now — and Why Nefotir

Every board is asking its leadership to show AI progress. Most organizations don't lack ambition — they lack the embedded engineering capacity, governance, and reusable playbooks to turn that ambition into working systems without runaway cost or risk. Nefotir.ai exists to close exactly that gap.

What CTOs Are Actually Wrestling With in AI

 **82%**

Token Costs Under Scrutiny

of AI leaders worry about token usage costs — 98% have already reconsidered their AI approach because of them.

EY, 2026

 **19%**

See AI Meet or Beat Goals

of AI initiatives have met or exceeded expectations; just 29% show real ROI from GenAI, 23% from AI agents.

CIO.com, State of the CIO 2026

 **67%**

Report Shadow AI Exposure

believe their company has already suffered a data exposure from an unapproved AI tool; 36% have no plan to supervise AI agents.

Writer, 2026 Enterprise AI Adoption Report

 **40%**

Lack In-House AI Expertise

cite a shortage of in-house AI talent; 75% admit their AI strategy is more for show than real guidance.

CIO.com / Writer, 2026

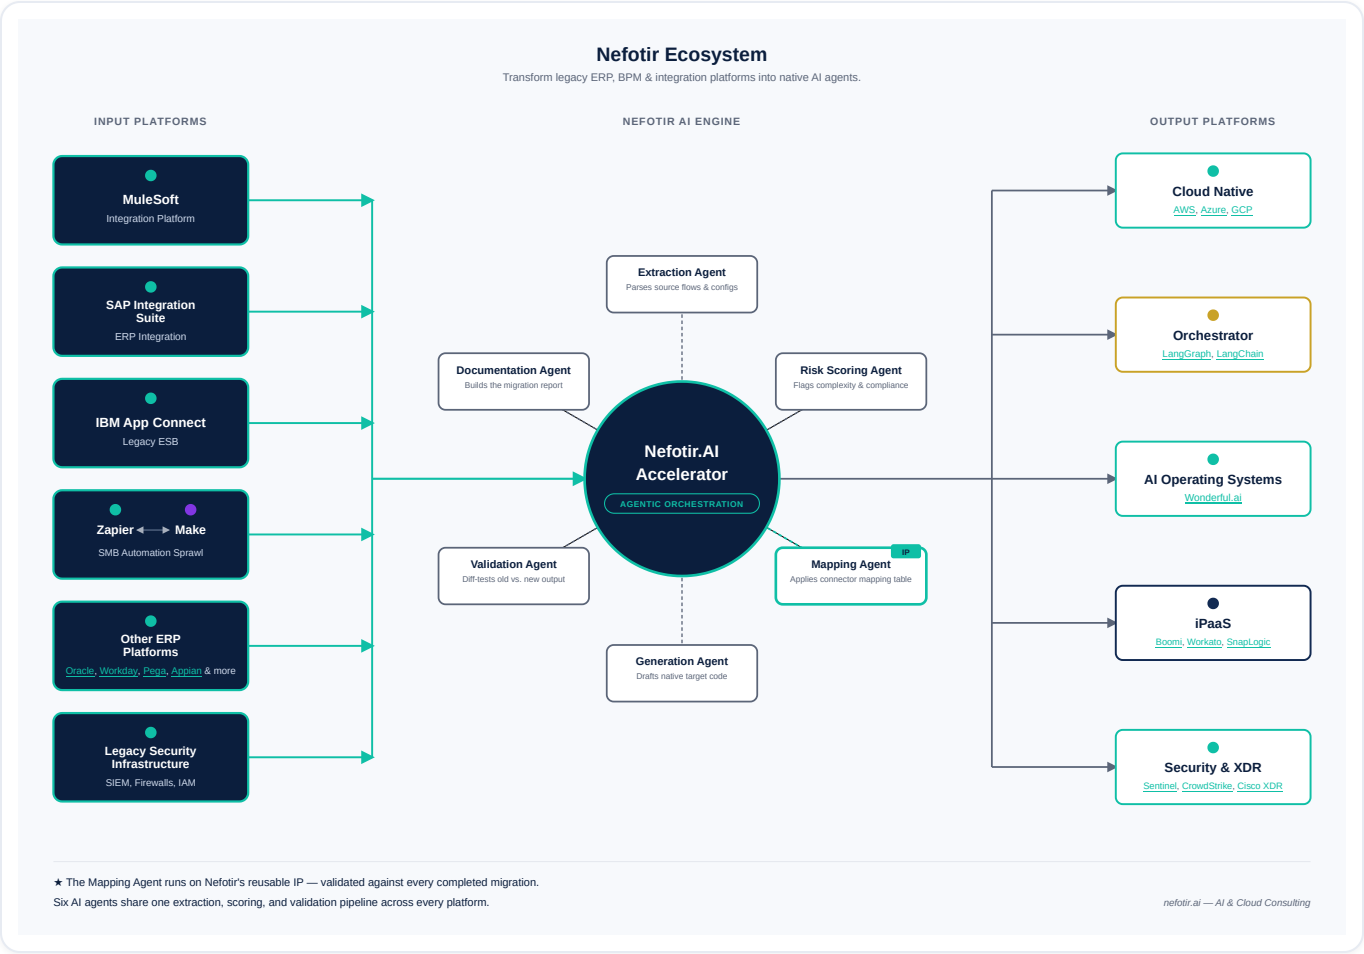

What Nefotir's Model Delivers

- **Speed to working value:** senior engineers embed directly inside the client's team, assisted by Nefotir's forward-deployed agents that handle the repeatable technical steps automatically — producing shipped systems in weeks rather than a strategy roadmap that sits unread for quarters.
- **De-risked delivery:** a reusable, purpose-built accelerator and framework (including the Connector Mapping Table) reduce the cost overruns and scope creep typical of generic systems-integrator migrations.
- **Right-sized cost:** senior, specialized engineering talent without Big-Four markup or the multi-quarter lead time of building an internal team from scratch.
- **Governance built in, not bolted on:** AI governance and FinOps practices are part of the engagement from day one, reducing exposure to shadow-AI risk and uncontrolled token/compute spend.
- **Knowledge transfer, not dependency:** client teams are upskilled alongside the embedded engineers, so capability stays in-house after the engagement ends.

The Nefotir Ecosystem

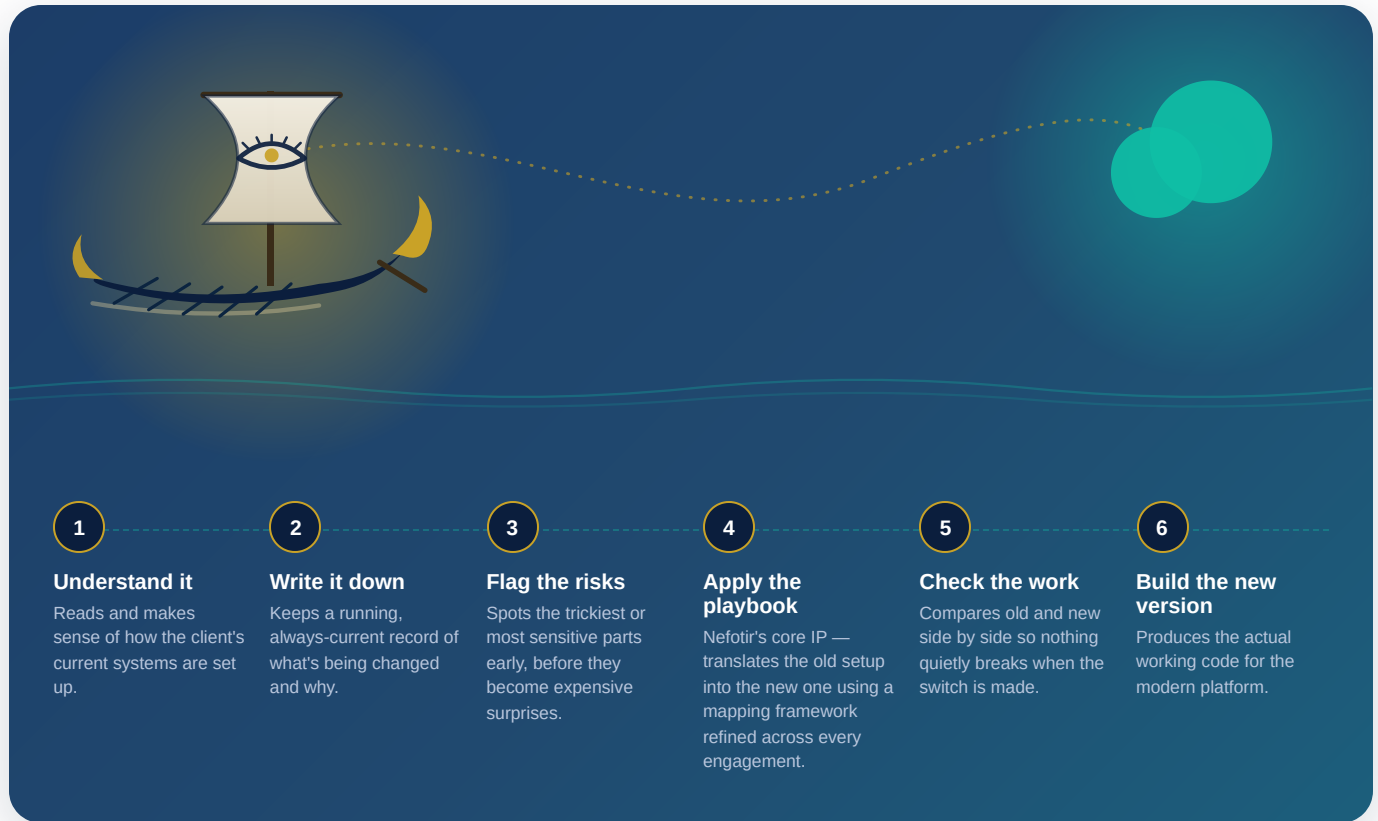

Every Nefotir engagement runs on the same underlying system, shown below. It's the reusable asset behind the business: the reason Nefotir can deliver a legacy modernization engagement faster and more consistently than a traditional systems integrator re-inventing the approach for every client, and the foundation for a future licensable product rather than a one-off consulting deliverable.

What's a "forward-deployed agent"? In plain terms, an AI agent is a small piece of software that uses AI to handle one specific, well-defined step of a job automatically — the way a specialized team member would — instead of a person doing that step by hand. Nefotir calls these forward-deployed agents: purpose-built AI agents deployed directly into the client's environment to work alongside Nefotir's embedded engineers, not replace them. Nefotir's system is built from six such agents, each responsible for one step of a legacy modernization project, working together on every engagement.

What This System Actually Does

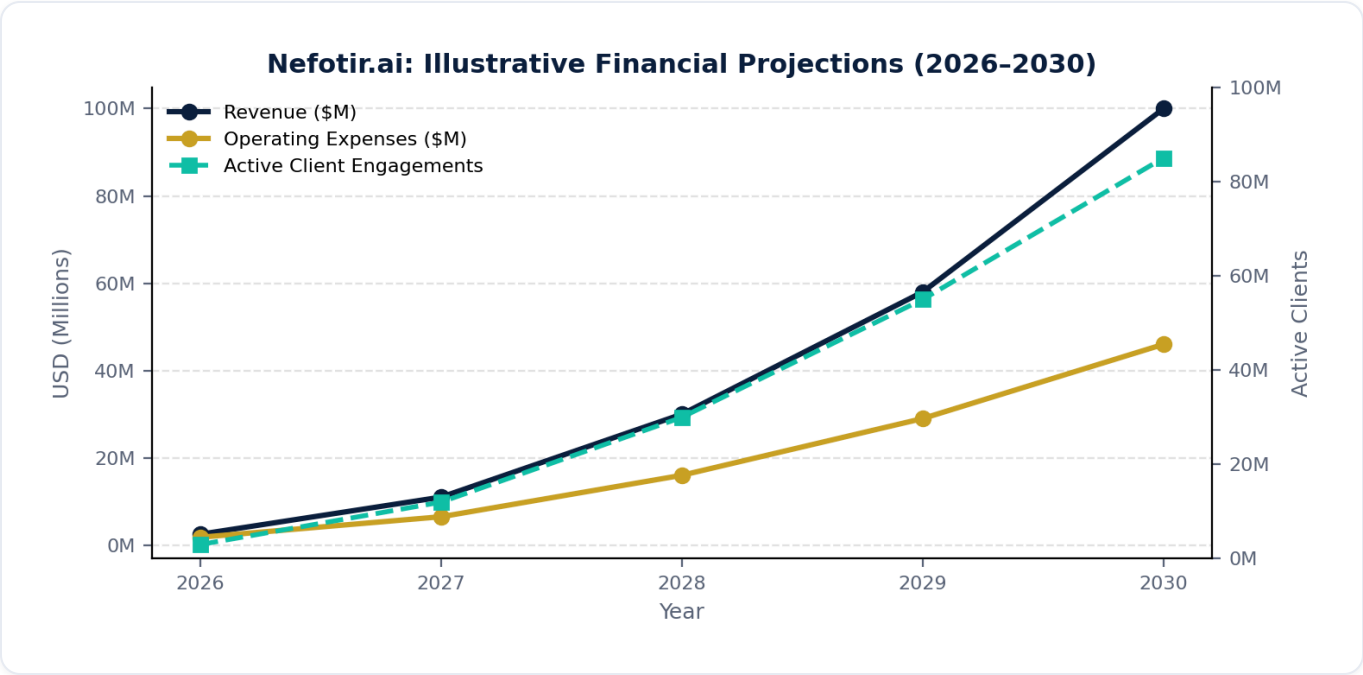

A client's existing systems — legacy integration tools, ERP platforms, and older automation tied together over the years — feed into Nefotir's system. Six forward-deployed agents then work through the same six steps on every engagement, in plain terms:

The finished, validated result then lands on whatever modern platform the client is standardizing on — modern cloud infrastructure, AI orchestration tools, or updated security systems, depending on the engagement. The same six-step system runs every time, regardless of what the client started with or is moving to. That consistency is the point: it's what turns Nefotir from a one-off consulting engagement into a repeatable, and eventually licensable, product.

Illustrative Financial Projections

Nefotir.ai is pre-revenue as of this package. The figures below are illustrative planning projections, not historical results, and are intended to size the opportunity as paying-client traction is established.

Business Model	Embedded engagement fees + accelerator/IP licensing over time
Average Engagement Size	USD 60K–250K per client engagement
Target Client Base (Year 3)	30 active engagements
Illustrative Year 1 Revenue (2026)	USD ~2.5M
Illustrative Year 3 Revenue (2028)	USD ~30M
Illustrative Year 5 Revenue (2030)	USD ~100M
Near-Term Capital Use (if raised)	Business development, delivery team hiring, formalizing contractor relationships, accelerator IP productization

Investment Structure & Use of Funds

Nefotir.ai is formally raising a \$5M SAFE in this first round. The structure and allocation below reflect the terms of this raise.

SAFE

Preferred near-term instrument —
no priced valuation required at this
stage

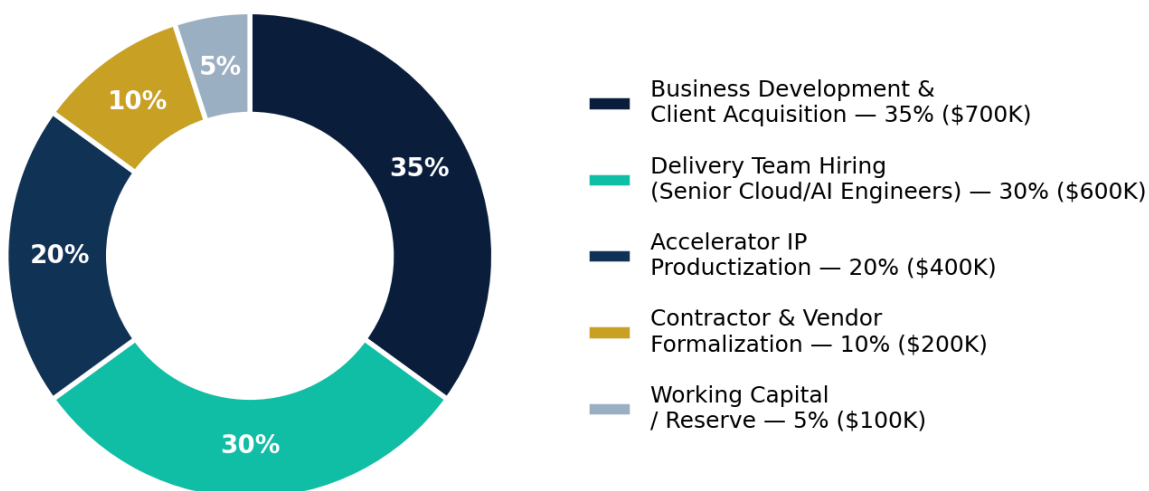

\$5M

Raise for expansion and initial
operational costs, sized to a \$100M
revenue trajectory

Strategic Fit First

Priority to investors who bring
domain credibility and client
introductions

Illustrative Use of Funds (\$2M Scenario)

This \$5M SAFE is intended to fund Nefotir's expansion and initial operational costs — team build-out, delivery capacity, and accelerator IP productization — behind the \$100M five-year trajectory. A formally priced institutional round remains a later-stage step once repeatable client traction and accelerator IP are further established.

Traction & Current State

- Actively building pipeline toward the first several paying client engagements.
- Legacy modernization accelerator ecosystem diagram and companion materials (covering SAP, MuleSoft, and Oracle migrations) built out for the Nefotir.ai site.
- Investor outreach templates (warm intro, cold outreach, angel-network blurb) in place, anchored around a framework-licensing narrative as the long-term investable angle.
- Evaluating a venture-advisory offering for incubated startups as a future (Phase 2) service line, once a client portfolio exists to support the claim.

Roadmap

Now → 12 Months

- Land first paying legacy-modernization clients (SAP, MuleSoft, Oracle)
- Formalize the part-time integration domain-expert relationship
- Build reference case studies from initial engagements

12–36 Months

- Expand into GenAI/LLM implementation and data platform engagements
- Begin productizing the Connector Mapping Table as licensable IP
- Open a formal institutional or strategic raise from a position of revenue

Why Talk to Nefotir Now

Nefotir is still early — deliberately so. Get in on this historic ground floor opportunity by getting in now — to maximize your return on investment. Wait, and you're paying up for the traction someone else backed first.

nefotir.ai

Cloud & AI acceleration — agents embedded with your teams — not another slide deck.

Nefotir.ai bridges the gap between enterprise ambition on cloud and AI, and the engineering capacity to actually deliver it — starting with a focused, defensible wedge in legacy ERP and integration modernization.

Sincerely,

Marcel Meyer
